1/ Figures are rounded to nearest million, and will not necessarily add to totals.
2/ The percentage figures are only roughly accurate because (1) the book value of bank holdings is somewhat greater than their par value, yet they are here given as percentages of the total par amount of the privately held marketable supply in each category; and (2) in the case of direct Government obligations, the deductions required to eliminate bank holdings of U. S. Savings bonds (which are not part of the marketable supply) were estimated.
